Abstract

Method and Device for Information Exchange, As Well As Corresponding Computer Program Product and Corresponding Computer-readable Storage Medium

A method for information exchange, comprises the steps of producing information transmissions in a broadcast standard; sending the information live from a studio; digitizing the sent data and then transmitting the digitized data via satellite as IP multicast packets; receiving the data by a TV decoder and feeding them into a data and/or communications network; installing software on a data processing equipment, like PCs or workplace computers, in which the software, after the data processing device has been connected to the data and/or communications network, permits receiving of information transmissions and use of at least part of the functions furnished by the information transmission; dialing via a portal to access an information transmission; and using the functions furnished by the information transmission via communications connections between the data processing equipment and studio for an interactive information exchange.
